Customisation

- Screen Printing: The most widely used technique. It consists, by the stencil method, of depositing the ink directly on the product. There are as many screens and passages as there are colours in the motif to be reproduced and all colours can be achieved. This technique makes it possible to produce very large quantities. It allows the use of inks with various effects for very different renderings and is adapted to almost all textile supports. The marking of coloured substrates requires an opacifying undercoat called « background white ».
- Transfert: The right technique for all materials. It is recommended for luggage, heavy garments, difficult to access surfaces. It consists of transferring the marking from a paper support to the garment by hot gluing. The marking by gluing brings rigidity to light supports at the level of the marking zone, nevertheless, the product keeps all its qualities of comfort.
